

A ECO 5 Annuale

BEE MIX AND BIODIVERSITY

Mix with eight essences belonging to three different botanical families with graduated flowering to guarantee a prolonged pabulum for bees and useful pollinators.

The used species are permitted both by the Italian ECOSHEMA 5 protocol and by the protocols of the main cereal "production chains" which provide for the sowing of "flowering areas". The mowing of the mixture after flowering and fruiting allows dissemination with consequent rebirth in the following year.

COMPOSITION (8 SPECIES)

Early crimson clover,
 Sweet yellow clover (*Melilotus officinalis*)
 Late crimson clover,
 Persian clover,
 Sulla (*Hedysarium coronarium*)
 Camelina,
 Dill (*Anethum graveolens*),
 Fodder rape

CYCLE

Annual
 (pluriannual with management)

SOWING PERIOD

September – November
 February – April

SEEDING RATE

25 – 30 Kg/ha
