

P ECO 5 Pluriennale

BEE MIX AND BIODIVERSITY

Mix with 11 essences belonging to three different botanical families permitted both by the Italian ECOSHEMA 5 protocol and by the protocols of the main cereal “production chains” which provide for the sowing of “flowering areas”. The use of perennial species and appropriated techniques, as the mowing of the mixture after flowering and dissemination of annual species, allow a prolonged persistency.

COMPOSITION (8 SPECIES)

Red clover, Early crimson clover, Sweet yellow clover (*Melilotus officinalis*), Late crimson clover, Persian clover, Sulla (*Hedysarium coronarium*), Sub clover, Dill (*Anethum graveolens*), Alfalfa, Fodder rape, White clover.

CYCLE

Pluriannual

SOWING PERIOD

September – November
February – April

SEEDING RATE

25 – 30 Kg/ha
