

CORN

GIUNONE

Consistent ear for record yields

- Always uniform, full ear with tight and very numerous rows.

- Maximum grain yields in all situations.

- For both grain and corn cob mix in the first and second sowing periods.

Fusarium (ear)				

The excellent agronomic characteristics and plant standability make the hybrid perfectly adaptable to all conditions. The consistently uniform ear guarantees increased seeding rate which translates into an increased production. The seeding rate, under favorable conditions, can be pushed up to 11 seeds/m².
