

To simplify sowing

SIMPLIFIED SOWING OPERATIONS

The presence of only big-sized seeds simplifies sowing operations which can be easily carried out with a conventional cereal seeder.

Simple and effective green manure. Triticale promotes the enrichment of organic matter in the soil and the capture of nitrates, broad bean and vetch provide nitrogen that can be used by following crops.

To maximize its effectiveness, terminate the green manure when the cereal is eared. The soil will be available for sowing of the following crop no earlier than the end of April/beginning of May.

COMPOSITION (3 SPECIES)

Early Triticale, Broad bean, Common vetch.

CYCLE

Annual (mid-early)

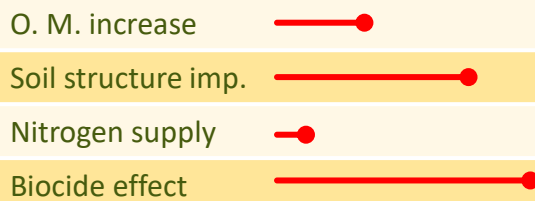

SOWING PERIOD

Autumn

SEEDING RATE

150 – 160 Kg/ha

BENEFITS

USAGE

Field crops, horticulture

TERMINATION

End of April
