

To increase nitrogen availability

- The Autumn mixture with a prevalence of legumes for a correct supply of nutritional elements
- Suitable for vines that require greater vegetative growth

COMPOSITION (10 SPECIES)

Broad bean, Field pea, Triticale, Forage pea, Crimson clover, Hairy vetch, Bristle oat, Common vetch, Phacelia, Brown mustard

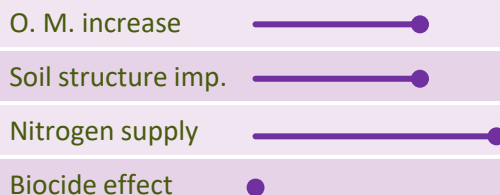

USAGE

Vineyard, Orchard, Kiwi

SEEDING RATE

120 - 140 Kg/ha

BENEFITS

SOWING PERIOD

October – November

THE UPGRADING GREEN MANURE – iIMix Green VITE N+ is a mix designed to maximize the supply of nitrogen, as well as guaranteeing advantages in terms of supply of organic matter and soil structure improvement.

- **Legumes** (Broad bean, Field pea, Vetch, Crimson clover): nitrogen-fixation and more in-depth structuring root system
- **Cereals** (Rye, Triticale, Oats): increase in stable organic substance thanks to the high C/O ratio. Surface structuring of the soil and effective nitrate trap thanks to the collated root system.
- **Cruciferous plants** (Minowase radish, White mustard, Brown mustard): decompacting and in-depth structuring effect thanks to the taproot system. Promotes the mobilization of Potassium
- **Phacelia**: increase in soil porosity thanks to the thick and deep hair of its root. Promotes phosphorus mobilization
