

## Feed and structure

- The Autumn green manure mix suitable for balanced soils
- Good soil structure improvement
- High organic matter increase

### COMPOSITION (12 SPECIES)

Rye, Triticale, Common oat, Bristle oat, Common vetch, Field pea, Broad bean, Crimson clover, Minowase radish, White mustard, Brown mustard, Phacelia,

### USAGE

Vineyard, Orchard, Kiwi

### SEEDING RATE

110 - 120 Kg/ha

### BENEFITS

### SOWING PERIOD

October – November

**BALANCED GREEN MANURE**– ilMix Green VITE is a balanced mix composed of numerous botanical families and species with multiple benefits:

- **Cereals** (Rye, Triticale, Oats): increase in stable organic substance thanks to the high C/O ratio. Surface structuring of the soil and effective nitrate trap thanks to the collated root system.
- **Legumes** (Broad bean, Field pea, Vetch, Crimson clover): nitrogen-fixation and more in-depth structuring root system.
- **Cruciferous plants** (Minowase radish, White mustard, Brown mustard): decompacting and in-depth structuring effect thanks to the taproot system. Promotes the mobilization of Potassium.
- **Phacelia**: increase in soil porosity thanks to the thick and deep hair of its root. Promotes phosphorus mobilization.
