

CLOVER

Egyptian clover

SACROMONTE

- Early variety, with rapid development in late Winter, more tolerant to low temperatures and powdery mildew attacks than the average.

- In full flowering, the size of the plant is above average (about 95 cm) with very high yield.

- Suitable for mowing, grazing or green manure.

SOWING PERIOD Autumn (South-Central areas)
Spring

SEEDING RATE: 25-30 kg/ha
