

FOXTAIL MILLET

Setaria Italica

PANICO

Foxtail millet (*Setaria italica*) is a very fast developing grass with Spring Summer vegetative cycle. It is well suited to be used as a Summer forage.

Appreciated by every animal specie also as green forage, it lends itself very well to be cut like hay and can produce, in a single cut, up to 6/7 tons per ha.

Normally two irrigations are sufficient: one for sowing and a second for raising.

- Mid early variety and medium tall size with robust culm.
- Well adapted to conditions of poor water availability.

SUGGESTED SEEDING RATE: 30-35 kg/ha
