Flowering cycle	Medium-early
Maturity cycle	Medium
Plant height	Medium-tall
Head exertion	Very good

QUALITATIVE CHARACTERISTICS

Grain color	Pure white
TKW (gr)	34-36

SEEDING RATES

Recommended seeds per m ²	40-45
Kg/ha	14

400.000 kernels bags

The new **Crystal** impresses for the panicle size, which determines an exceptional production potential. It maintains excellent spike fertility even in the most stressful climatic conditions, that are increasingly recurring in recent seasons. The impressive plant and the excellent stay-green, even in the basal parts of the stem, make it suitable to produce highly energetic silage.
