

ERBAIO L

Medium-early cycle

Italian ryegrass based forage

- Mixture with prevalence of legumes for a high protein intake
- The quality of the fiber and the protein content are enhanced when mowed before the ryegrass flowering.
- The use of crimson clover makes this mix particularly suitable for northern regions and for Autumn sowing.

USAGE TYPES	
Hay	<input type="range" value="4"/>
Pasture	<input type="range" value="2"/>
Green forage	<input type="range" value="4"/>
Pre-withered	<input type="range" value="5"/>
Silage*	<input type="range" value="4"/>

* pre-withering advised

INTENDED USES	
Dry period	<input type="range" value="2"/>
Lactation/replacement	<input type="range" value="5"/>
Energy/Biogas	<input type="range" value="2"/>

SEEDING RATE
90-100 kg/ha

SOWING PERIOD
Autumn

COMPOSITION
Common vetch
Crimson clover
Lolium italicum tetrap. w.w
