

## MEGATON

Medium-late

## Cereals and legumes based forage

- Productive and stable mixture, that enhances the virtuous competition between species and families.
- The presence of legumes provides proteins and nitrogen availability for the cereal.
- It allows to interrupt the mono-succession of cereals (Eco 4) where autumn-winter crops for the production of biomass cannot be ignored.

## USAGE TYPES

Hay	<input checked="" type="checkbox"/>
Pasture	<input checked="" type="checkbox"/>
Green forage	<input checked="" type="checkbox"/>
Pre-withered	<input type="checkbox"/>
Silage	<input type="checkbox"/>

## INTENDED USES

Dry period	<input checked="" type="checkbox"/>
Lactation/replacement	<input type="checkbox"/>
Energy/biogas	<input type="checkbox"/>

## SEEDING RATE

210 - 220 kg/ha

## SOWING PERIOD

Autumn

## COMPOSITION

Awnless Triticale

Mid late wheat

Field pea

Broad bean
