

CLOVER

White clover

APOLO

- The *Trifolium repens* Apolo is characterized by a prostrate shape and with abundant stolons, which give it an excellent ability to compete with weeds.
- Of medium size and with abundant leafiness, it is suitable for grazing and intercropping with graminaceous plants in order to create permanent pasture meadows.
- Its quite rapid development and prostrate shape make it particularly suitable for intercropping with milling cereals also thanks to its good nitrogen-fixing capacity.
- Good melliferous plant, appreciated by pollinators.

SOWING PERIOD Autumn and Spring

SEEDING RATE: 10-15 kg/ha
