

# CLOVER

*White clover*

**NEMUNIAI**

- The *Trifolium repens* Nemuniai is characterized by a semi-prostrate shape and with abundant stolons which gives it an excellent ability to compete with weeds, an anti-erosive effect and load-bearing capacity for operating machines.

- Of medium size and with abundant leafiness, it is suitable for grazing and intercropping with graminaceous plants to create permanent pasture meadows.

- Good melliferous plant, appreciated by pollinators.

**SOWING PERIOD** Autumn and Spring

**SEEDING RATE:** 10-15 kg/ha
