

## Soil protection

**COMPOSITION (4 species):** Italian rye grass, Perennial rye grass (turf type), Red fescue, Tall fescue (turf type)

### BENEFITS

### USAGE TYPE

Technical grassing for soil protection of embankments.

### SOWING PERIOD

Autumn and Spring

### SEEDING RATE

80 - 100 Kg/ha

Technical grassing composed of species and varieties with a root system suitable for binding the soil, able to form a resistant sward. The addition of species with rapid development (Italian ryegrass) gives a rapid soil cover. Also suitable for hydro-sowing.
